The rapid integration of artificial intelligence (AI) technologies such as Chat GPT into education has raised concerns about its potential to suppress student's critical thinking skills. This study aims to examine whether Chat GPT facilitates or hinders critical thinking development through adaptive and individualized learning interactions. Using a qualitative approach data were collected through in-depth interviews and direct observations of students and lectures at Nurul Jadid University. The findings indicate that Chat GPT can enhance classroom discussions, encourage students to consider multiple perspectives and refine analytical skills. However, challenges such as over-reliance on AI, information bias and decreased independent reasoning must be addressed to optimize AI's role in education. This study concludes that while Chat GPT offers significant benefits in fostering engagement and analytical reasoning. Its effective integration requires careful pedagogical strategies. The study contributes to educational research by providing insights into AI-assisted learning and proposing guidelines for maximizing AI's educational potential while mitigating its drawbacks.
